

REACH (Directive No. 1907/2006)

Sensitec with its locations Wetzlar and Mainz develops and produces electronic components and systems.

In that role, we process chemical substances and composites and hence by definition of REACH directive No. 1907/2006 act as a so-called “2nd level distributor”. Our products are neither raw materials and / or composites in the sense of REACH nor do they emit them during intended use. As a consequence, our products don't have to be registered according to REACH.

We order only REACH compliant products according to the latest SVHC list. Based on the information provided by our suppliers, we currently do not have any indication that our products contain forbidden substances or substances of very high concern (SVHC) as listed by REACH directive 1907/2006.

If our ongoing controls or information by our suppliers should indicate the presence of these substances in our products, we will promptly inform our customers.

RoHS (EU directive 2011/65EU) and supplement 2015/863

Sensitec is committed to develop and produce its products in accordance with the EU directive 2011/65EU (RoHS II) and its supplement 2015/863.

To ensure this goal, Sensitec only accepts RoHS compliant goods from its suppliers and, on a regular basis, requests RoHS compliance declarations throughout its supply chain.

Conflict Minerals (Dodd-Frank Act, Sect. 1502 / EU Conflict Minerals regulation 2017/821)

Since in some regions of the world earnings from raw material production are used to finance armed conflicts, a number of initiatives has been launched to cut the connection between the mining of raw materials and an aggravation of conflicts – amongst them Section 1502 of the US-American Dodd-Frank-Act and the EU Conflict Minerals regulation.

Sensitec generally supports the goals of such initiatives and moreover demands of its suppliers to comply with its code of conduct.

However, Sensitec is no importer of conflict minerals or metal stage products as defined by the EU Conflict Minerals regulation 2017/821; as a consequence, we don't have to comply with mandatory due diligence rules of this regulation.

Furthermore, due to our complex supplier structure and supply chain, we cannot fully adopt a product-related approach and a continuous certification to achieve full traceability from the raw material all the way to the final product.

Nonetheless, as part of our due diligence regarding conflict minerals, we have queried our direct suppliers of 3TG materials and, based on the feedback received, are able to confirm to a certain extent - which varies by product group - the absence of conflict.

Upon request, we will be happy to provide you with our latest CMRs (Conflict Minerals Reports
